Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

## ALIGNMENTS

Syncolatic antiviral composition contains BFGF and sulphated by Olyaaccharide for treating viral infections e.g. HSV-1 and -2, cytomegalovirus, HIV, influenza virus etc.

Tytomegalovirus, FIV, influenza virus etc.

Disclosure; Page 4; 20pp; English.

This sequence represents acidic fibroblast growth factor (aFGF).

aFGF, or its fragments may be used in synergistic compsn. with an antivirally active sulphated polysaccharide, and one or more artifers and page and one or more carcipients. The compsn. may be used to control herpes simplex virus (HSV-1 or -2) herpes varicella/zoster; cytomegalovirus; influenza; human respiratory syncytial virus; Semliki Forest virus; HIV or Moloney Sarcoma virus. The combination of aFGF with sulphated copysaccharide is found to have a greater antiviral activity than sequence 140 AA; 126-JAN-1993 (first entry)
Human acidic fibroblast growth factor.

Viral infections; viruses; FGF; herpes simplex virus; HSV-1; HSV-2; herpes varicella; herpes zoster; cytomegalovirus; influenza; human respiratory synoytial virus; Semliki Forest virus; HIV; human immunodeficiency virus; Moloney Sarcoma virus. EP-497341-A.

DNA encoding FGF mutein Disclosure; Page 3; 23pp; Japanese.

The invention covers muteins of FGF (esp., DFGE), which contains least one glycosylation site. The muteins can be used to treat burns and thrombosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              5 PGNYKKPKLLYCSNGGHFLRILPDGTVDGTRDRSDQHIQLQLSAESVGEVYIKSTETGQY 64

Human acidic fibroblast growth factor.
Endothelial cell growth factor; ECGF; blood vessel; regeneration;
heparin-Sepharose affinity chromatography; probe; oligonucleotide;
FGF; fibroblast growth factor; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New recombinant human acidic fibroblast growth factor - used to promote cell growth, to promote wound healing, for vascular grafts and blood vessel repair
Claim 2: Column 30: 25pp: English.
Oligonucleotides were synthesized on the basis of the amino acid sequence of bovine acidic fibroblast growth factor (aFGF) and used to produce a synthetic gene (given in Q88233) incorporating codons preferred by E. coli or manmalian cells, unique cloning sites, etc. This synthetic gene was mutagenized to obtain a gene encoding a human recombinant aFGF (R74647) having activity sequivalent to the native protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   25-SEP-1995 (first entry)

                                                                                                                                                                                                                                                                                      Insolated, purified, biologically active bovine beta endothelial cell growth factor - useful to regenerate or treat damaged blood vessels Disclosure; Fig 8: 28pp; English.

Bovine beta-endothelial cell growth factor (beta-ECGF; W03999) having a mol.wt. of 20 kD can be purified at least 16300 fold from bovine brain using heparin-Sepharose affinity chromatography. ECGF is potential in the treatment of damaged blood vessels or other endothelial cell-lined structures. Human ECGF (137509) or fragments may be obtained using onlygonucleotides (T37504 and T37508 to T37509) whose design is based on the sequence of bovine alpha- and beta-ECGF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Mitogenic polypetide isolated from human brain tissue - useful for increasing vascular effect in eg wound healing, or generating endothelial cell linings for vascular prostheses, etc. Claim 3; Page. 1; 31pp; English.

The PF of the invention was obtd. from human brain tissue. It has a mon. wt. of 15,200-16,500 (pref. 15,516-16,056) and has a high affinity for heparin. PFl and fragments are useful for promoting the growth of mesoderm-derived cells or neuroectoderm-derived cells and generating endothelial cell linings for vascular prostheses (all sequence 140 AA).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       13-JUN-1991 (first entry)
Sequence of human proteinaceous factor (PFI) with mitogenic activity.
Cell growth promoter; mitogen; vascularisation; wound healing.
Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        64
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          96

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Anti-acid antibody, for cancer diagnosis, etc. - is obtd. by using complex of partial peptide(s) of acid fibroblast growth factor and protein as antigen.

Disclosure: Fig 1; 19pp; Japanese.

The was deduced from a gene used to produce recombinant : FGF.

Peptides derived from the protein, esp. from A-D can be used to as antigens to produce anti-aFGF antibodies. The peptides aust comprise 8-10 continuous AAs from A or B (claims 5 and 6 resp.).

7-10 continuous AAs from C (claim 7), or 8-9 continuous AAs from D (claims 9. The Abs from D (claims 9. The Abs can be used for immunochemically me.suring aFGF, and for purifying aFGF. They are useful as reagents if the diagnosis of various cancers or diseases of the CNS. Purified aFGF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Length 141;

This represents the amino acid sequence of human beta-endothelial cell growth factor (ECGF). The invention is directed to DNA encoding alpha or beta-ECGF and plasmids comprising the DNA sequences. The DNA encodes a cleavable signal peptide and an ECGF, where removal of the signal peptide yields a mature form of the ECGF. The DNA is used to produce recombinant ECGF proteins, which can be used in treatments to repair or regenerate blood vessels or other structures lined with endothelial cells.
                                     DNA encoding a cleavable signal peptide and an endothelial cell growth factor - useful for producing recombinant endothelial cell growth factor proteins
                                                                                                                                                                                                                                                                                   Score 985; DB 1;

The synthetic arcg gene incorporates useful restriction sites at frequent intervals to facilitate the cassette mutagenesis of selected regions. Also included are flanking sites to simplify the incorporation of the gene into any expression system. The arcg mol. acts in a cascade effect to control endothalial cell activity either co-ordinately through synergistic effects or via independent routes. The regulation of endothelial cells is essential for the protection of arteries, velns and capillaries from the effect of thrombogenesis. Their slimulation and control by these factors is also thought to be important in the development of tumours and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Disclosure: Fig 8: 28pp; English.

Bovine beta-endothelial cell growth factor (beta-ECGF; W03999) having a mol. wt. of 20 kD can be purified at least 16300 fold from bovine brain using heparin-Sepharose affinity chromatography. ECGF is useful for, among other purposes, diagnostic applications and has potential in the treatment of damaged blood vessels or other endothelial cell-lined structures.

Human ECGF (137503) or fragments may be obtained using oligonucleotides (T37504 to T37508 to T37509) whose design is based on the sequence of bovine alpha- and beta-ECGF.

Compositions for promoting wound healing - containing endothelial cell growth factor polypeptides call growth factor polypeptides claim 1, Column 16, 20pp; English.

This sequence represents the amino acid sequence of the mature human beta-endothelial cell growth factor (b-ECGF). This amino acid sequence 1s identical to the alpha-ECGF but the beta sequence contains an extra 20 N-terminal amino acids. The sequence was isolated from a human brain stem cell cDNA library using a probe designed based on fragments of the bovine ECGF (see W75116-W75418). The ECGF protein can be used in compositions for promoting wound healing. ECGF is also used to grow sequence 154 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            LAMDTDGLLYGSQTPNEECLFLEENHYNTYISKKHAEKNWFVCLKKNGSCKRGPRTH 139

Claim 1: Column 16: 22pp: English.
Human recombinant endothelial cell growth factors (ECGF) beta
Human recombinant endothelial cell growth factors (ECGF) beta
(W06816) and alpha (W06817) differ only at their N-terminal ends.
They can be produced in transformed prokaryotic or eukaryotic host
cells using DNA sequences (T45983 and T45984, respectively) derived
from the complete human ECGF CDNA (T45885). Large quantities of
the ECGFs are produced by culturing the host cells and recovering
the proteins. ECGFs have utility in the growth and amplification
of endothelial cells in culture. They can potentially be used to
treat damaged blood vessels and other endothelial cell-lined
structures, and also have diagnostic applns.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     19 PGNYKKPKLLYCSNGGHFLRILPDGTVDGTRDRSDQHIQLQLSAESVGEVYIKSTETGQY 78

Novel fusion proteins comprise FGF linked to saporin. FGF-1 to -9
may be used, pref. FGF-1 (R70812), FGF-5 (R70813), FGF-7 (R70814) or
FGF-8 (R70815) muteins, in which at least 1 Cys residue is replaced
by conservative Ser substitutions. The fusion proteins are potent
cytocidal agents to cells bearing the FGF receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              20 PGNYKKPKLLYCSNGGHFLRILPDGTVDGTRDRSDQHIQLQLSAESVGEVYIKSTETGQY 79

R Human endothelial cell growth factor - produced by recombinant

T Human endothelial cell growth factor - produced by recombinant

T DNA techniques, useful for wound healing

S Example; Fig 8; 43pp; English.

C ro screen the human brain stem cDNA library for clones contg. ECGF

Inserts, a specific oligonucleotide was designed. This

c oligonucleotide was based upon a partial AA sequence analysis of

the aminot terminans of ECGF (see P70480 and P70481). Fig 3c sets

C forth for comparison the AA sequence of cyanogen bromide-cleaved

bovine alpha and beta ECGF (P70834). The two clones that were

c isolated, ECGF clones 1 and 29, were analysed in further detail. The

nucleotide sequence of these clones and the AA sequence deduced from

the nucleot acid sequence is shown in Fig 8 (see N70788 and P70482).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                80 LAMDTDGLLYGSQTPNEECLFLERLEENHYNTYISKKHAEKNWFVGLKKNGSCKRGPRTH 139

-!- FUNCTION: THE HEPARIN-BINDING GROWTH FACTORS ARE ANGIGGENIC AGENTS
IN VIVO AND ARE POTENT MITOGENS FOR A VARIETY OF CELL TYPES IN
VITRO. THERE ARE DIFFERENCES IN THE ILSSUE DISTRIBUTION AND
CONCENTRATION OF THESE 2 GROWTH FACTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          PFAM: PF00167; FGF; 1.

J. Biochem. 181:67-73(1989).
-!- FUNCTION: THE HEPARIN-BINDING GROWTH FACTORS ARE ANGIOGENIC AGENTS
IN VIVO AND ARE POTENT MITGENS FOR A VARIETY OF CELL TYPES IN
VITRO. THERE ARE DIFFERENCES IN THE TISSUE DISTRIBUTION AND
CONCENTRATION OF THESE 2 GROWTH FACTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          01-FEB-1991 (Rel. 17, Created)
